1. Notes:
1) Inside of fire pit must be lined with a heat-resistant material
2) Affix all units with construction-grade adhesive
3) These blocks are not fireproof and could start to crack under extreme heat. These blocks are intended for landscape applications and are not fire-rated. Over time the blocks may crack. A possible solution is to use heavy fire-rated bricks or a steel liner on the interior of an above or below ground fire ring/pit with the blocks outside the perimeter. Again, the heat may adversely affect landscape products, even with an interior heat-resistant barrier in place.

Section A-A

Remove rear-lip

Sand
Paver Patio

8" Class 5 Aggregate

Line sides of firepit with fire brick or steel insert

Piece Counts:
Column/Cornet 8
6x16x8 8
6x8x8 8

BelAir Wall™
Square Firepit Construction

Drawn By: AWE
