The Celtik wall is made up of blocks called modules. The Celtik module is available in two thicknesses:
- 90 mm (3 1/2 in.), 135 mm (5 1/4 in.).

90 mm (3 1/2 in.) modules
- The 90 mm modules are available in four lengths:
  - 170 mm (6 3/4 in.)
  - 260 mm (10 1/4 in.)
  - 350 mm (13 3/4 in.)
  - 440 mm (17 1/4 in.)

135 mm (5 1/4 in.) modules
- The 135 mm modules are available in four lengths:
  - 170 mm (6 3/4 in.)
  - 260 mm (10 1/4 in.)
  - 350 mm (13 3/4 in.)
  - 440 mm (17 1/4 in.)

The entire Celtik wall system is based on a simple formula. By choosing different modules, you can obtain various combinations. Each combination is 24 in. long and 8 3/4 in. high.

Throughout this guidebook, we will call these combinations by the following names:
- 90/135 combination and 135/90 combination (see illustration). It is important to have a good understanding of the combination principle before going on to the next step.

The Celtik wall may look complicated, but it is based on a very simple system. When the system’s instructions are properly followed, the result will be a unique, natural-looking wall.

These graphic representations are intended for preliminary design purposes only.
Retaining walls over two (2) feet in height will require additional engineering including soil reinforcement or geogrid.
