Typical Details for Utilities Below Wall

This area must be backfilled with select fill, compacted to 100 percent of the standard Proctor maximum dry density.

\[ W_f = (2 \times D_p) + L + 6" \]

\[ D_p = \text{depth of pipe} \]

\[ W_f = \text{width of granular fill} \]

\[ L = \text{length of geosynthetic reinforcement} \]

Any disturbance of the soils outside the 1:1 excavation area must also be filled with select fill.

Utilities (designed by others)

Depth varies
